ABSTRACT

Various Islamic finance issues lately are an interesting topic although there is often controversy about the existence of Islamic financial institutions and instruments. So to be able to get an accurate answer, need a lot of in-depth study of this. This study examines the influence of financial performance of sharia bank to stock price which data is taken from financial report of Bank Syariah year 2010 to 2015 and share price data of Bank Syariah with same year. The main indicators of financial performance of banking are: ROA, ROE, NPM, PER, DER, EPS as independent variable and its share price as dependent variable. The study population is all sharia banks. Sampling technique is Sample Random Sampling. This research uses Explanatory Survey Method which focuses on relationship among variables. The research instrument is conducted by documentation study through a review of various written sources including journals, financial reports, books, laws and regulations relating to theoretical concepts. Analyze the calculation technique using SPSS statistical program package. The results showed that the financial performance simultaneously had a significant effect on banking stock prices but not partially.
